

Ethical responsibilities of authors

Authors should refrain from misrepresenting research results which could damage the trust in the journal, the professionalism of scientific authorship, and ultimately the entire scientific endeavour. Maintaining integrity of the research and its presentation can be achieved by following the rules of good scientific practice, which include:

1. The manuscript has not been submitted to more than one journal for simultaneous consideration.
2. The manuscript has not been published previously in any journal (partly or in full), unless the new work concerns an expansion of previous work (please provide transparency on the re-use of material to avoid the hint of text-recycling ('self-plagiarism')).
3. If manuscript already been published elsewhere, the author should mention it and ensure there is no copyright infringement.
4. No data have been fabricated or manipulated (including images) to support your conclusions.
5. No data, text, or theories by others are presented as if they were the author's own ('plagiarism').
6. Proper acknowledgements to other works must be given (this includes material that is closely copied (near verbatim), summarized and/or paraphrased), quotation marks are used for verbatim copying of material, and permissions are secured for material that is copyrighted.
7. *Important note: the journal may use software to screen for plagiarism.*
8. Consent to submit has been received explicitly from all co-authors, as well as from the responsible authorities - tacitly or explicitly - at the institute/organization where the work has been carried out, *before* the work is submitted.
9. Authors whose names appear on the submission have contributed sufficiently to the scientific work and therefore share collective responsibility and accountability for the results.
10. Authors are strongly advised to ensure the correct author group, corresponding author, and order of authors at submission. Changes of authorship or in the order of authors are *not* accepted *after* acceptance of a manuscript.

11. Upon request authors should be prepared to send relevant documentation or data in order to verify the validity of the results. This could be in the form of raw data, samples, records, etc. Sensitive information in the form of confidential or proprietary data is excluded.
